**1915–2015**  
100 years of tradition

# Welcome to the Asklepios hospital, Lindau!

Our hospital has been a guarantee of acute inpatient care in Lindau and its surroundings for over 100 years. We look back with pride to this long period and the tradition that accompanies it.

With around 300 employees, we offer health care with the latest in medicine and technology – without losing sight of

the needs and well-being of our patients. This constitutes our strength – and has been for more than a century.

Modern medicine, patient-focussed care and human attention - this is what we continue to stand for. Together for your health.

# Internal

- Cardiovascular diseases
- Diseases of the abdominal organs
- Cancer and blood diseases
- Hormone disorders, osteoporosis and diabetes
- Nutritional medicine
- Gastroscopy and colonoscopy
- Modern ultrasound methods for abdomen, heart, thyroid and vasculature
- Gall stone and biliary tract therapies (ERCP)

# Medicine

The Internal Medicine department cares for patients with all internal conditions. As well as physicians with general training in internal medicine, our team includes specialists in the areas of:

liver, gastrological and intestinal diseases (gastroenterology and hepatology), cancer and blood diseases (haematology and oncology), cardiovascular diseases (cardiology), hormonal disorders, osteoporosis and diabetes (endocrinology) and nutritional medicine. There is a close cooperation with the in-house dialysis unit for the treatment of kidney diseases (nephrology) as well as with specialists in neurology and urology. For highly specialised and scientific questions,

there is a cooperation, among others, with the department for Haematology and Oncology at the University of Heidelberg and the German Centre for Cancer Research in Heidelberg. We use a wide spectrum of internal investigation methods including highly modern x-ray systems for treating gall stones and other biliary tract disorders.

We offer our patients human and at the same time outstanding medical care in a very personal environment. This includes the sympathetic care for old, frail and critically ill patients as well as the specialised treatment of complex illnesses.

# General and

- Minimally invasive surgery
- Abdominal surgery
- Tumour surgery
- Endocrine surgery (thyroid, adrenal gland)
- Hernia surgery
- Proctology (haemorrhoids, anal fistula, intestinal prolapse)
- Venous surgery
- Wound consultations

# visceral surgery

Visceral surgery is the specialised surgery for internal organs in the abdomen, the hormone-producing glands and diseases of the rectum.

In our department for general and visceral surgery, all examinations and treatments are carried out with the aid of the most modern diagnostic and operational procedures. In the process we align our work to the guidelines from national and international professional bodies.

One of our specialisms is in the area of minimally invasive “keyhole” surgery. Alongside the treatment of biliary tract diseases, gastro-oesophageal reflux or hernias, we also offer the complete spectrum of oncological surgery. Minimally

invasive surgery is also increasingly used here. The treatment of malignant diseases of the stomach, intestine, liver, pancreas and oesophagus is carried out in accordance with an interdisciplinary treatment concept.

Further specialisms consist of endocrine surgery (including minimally invasive thyroid operations) and proctology (e.g. haemorrhoids, anal fistula and intestinal prolapse). Numerous general operative interventions are carried out on an outpatient basis.

Our team of experienced doctors, nurses and technical employees takes care individually of all activities connected to the operation.

Senior consultant  
Prof. Dr Ulrich Schöffel

# Orthopaedic and

A photograph showing a medical team in white coats consulting with a patient in a hospital room. A male doctor with glasses and a watch is standing on the right, holding a folder. Two female nurses or medical assistants are standing in the center, one holding a pen and the other holding a folder. A female patient is sitting in a bed on the left, looking towards the medical team. The room has a window with curtains and a white wardrobe in the background.

- Endoprosthetic centre
- Age trauma centre
- Trauma network
- Accident insurance consultant process
- Minimally invasive joint replacement and prosthesis change
- Use of computer navigation
- Treatment of bone fractures
- Shoulder surgery
- Foot surgery
- Minimally invasive joint surgery

# trauma surgery

In the first certified endoprosthesis centre on Lake Constance and in the Allgäu region, joint complaints of all kinds are treated after a detailed examination and diagnosis from minimally invasively with arthroscopy using AMIS technology to computer-guided knee implant.

Problems with non-functioning endoprotheses can be examined in detail and treated with a replacement of the artificial joint where appropriate.

A particularly important task is the treatment of all kinds of injuries from accidents, particularly bone fractures and their consequences for older people. These patients are cared for medically and operatively within a comprehensive, interdisciplinary framework.

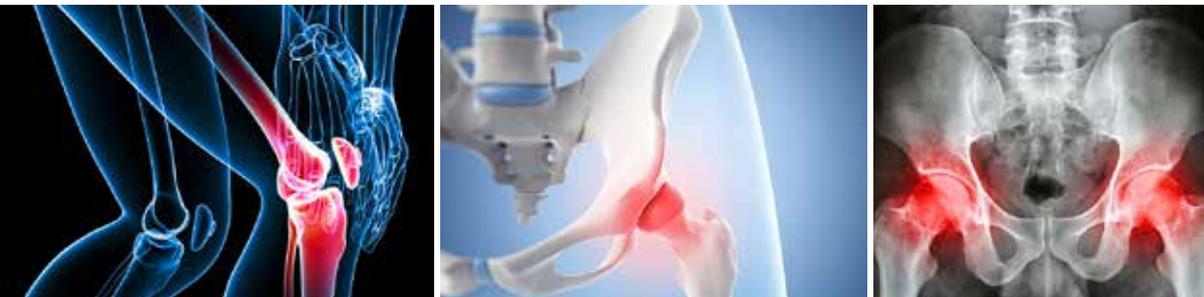

Special problems in joint surgery, such as the shoulder or feet, are treated by certified specialists in the department.

# Spinal

- Spinal disc damage, spinal canal stenosis, spondylolisthesis
- Vertebral fracture, pelvic fracture
- Defective position (scoliosis, kyphosis)
- Complaints after previous operations
- Stiffening
- Dynamic stabilisation
- Spinal disc prosthesis
- Minimally invasive and endoscopic operations

# diseases

The department has the professional expertise and all the technical requirements to advise patients with spinal diseases. A broad range of non-operative and operative procedures are available therapeutically. The non-operative treatment is based on infiltration supported by x-ray, pain treatment, physical or physiotherapeutic techniques.

With operative treatment, the spectrum reaches from minimally invasive decompression and spinal disc operations to procedures involving endoscopy and conventional open interventions. Mainly stabilising implants are used, but also systems for retaining mobility such as spinal disc prostheses. Here

the focus lies on the process for which scientific investigations have evidenced the long-term effectiveness. A significant goal is to proceed using minimally invasive techniques wherever possible for these procedures. In addition, as a rule we achieve individually tailored therapies through the combination of different techniques.

In particular, the clarification of and therapy for complaints after previous operative interventions on the spine is one of our key areas.

For urgent cases, there is the possibility of operative treatment without delay as a result of our continuous readiness system.

Senior consultant  
Dr. med. Stephan Werle

# Gynaecology and

A close-up photograph of a pregnant woman's bare abdomen. She is wearing black lace underwear. On her belly, there is a grid of eight hand-drawn tally marks, arranged in two columns of four. The marks are drawn in a dark ink or marker. The woman's hand is visible at the bottom, holding the marker.

- Obstetrics
- Prenatal ultrasound diagnosis
- Gynaecological outpatient department (dysplasia, oncology, incontinence, breast)
- Operations outpatient department
- Minimally invasive operation techniques
- Incontinence surgery
- Surgery for all malignant diseases of the female genitalia
- Breast cancer diagnosis, therapy for mammary carcinomas

# obstetrics

Our department for gynaecology offers a wide range of medical services in the areas of gynaecology and obstetrics.

One focus of our gynaecological operative department is minimally invasive surgery. Laparoscopy is used in the diagnosis and in therapies for complaints in the pubic region. Alongside the well-established "key hole" operations, almost all hysterectomies done by us these days, including malignant diseases, are carried out with minimally invasive techniques.

The treatment of breast cancer is carried out according to the latest scientific findings in close cooperation with the Lake Constance Breast Centre.

Alongside the treatment of tumours, further areas of focus lie in the treatment of sedimentation conditions and urinary incontinence.

In obstetrics, our team offers you comprehensive support before, during and after the birth.

Every expectant mother is allocated to an experienced and committed midwife during the birth to address her individual needs.

The nursery, staffed by experienced nurses and three paediatricians, is attached to the ward. In this way, paediatric care can be ensured around the clock.

# Anaesthesia and

A medical monitor displaying multiple vital signs and waveforms. The top section shows a green ECG waveform. Below it is a red waveform, likely representing a respiratory or hemodynamic parameter. The bottom section shows a yellow waveform. The monitor has a dark background with white and colored text and lines.

- General anaesthesia
- Regional anaesthesia
- Anaesthetic recovery room
- Anaesthesia consultation
- Intensive care
- Postoperative pain therapy
- Obstetric pain therapy
- Emergency medicine/reanimation

# intensive care

A team of experienced anaesthetists and specialist nurses cares for the patients before, during and after an operation. With our regional and general anaesthetics, we cover all operative and conservative subjects in our hospital. This includes patients from the areas of general surgery, orthopaedic/trauma surgery, spinal surgery, ear, nose and throat medicine, gynaecology and obstetrics, urology and internal medicine.

Our team is available every day around the clock in the hospital.

In all our activities, patient safety and patient satisfaction have the highest priority.

To reduce blood loss, for larger operative interventions, autotransfusion (processing blood from wounds) is used.

After painful operations on the knee, shoulder or arm, or after extensive stomach interventions, patients are regularly cared for using a pain catheter and supported in the post-operative period by our pain team.

In our interdisciplinary intensive ward with a total of 3 respiration units, we care for patients after serious operations and also critically ill patients. Working together with the dialysis centre in Lindau, we have the possibility for acute dialysis.

With the in-house reanimation team, we ensure emergency doctor support at the Asklepios hospital in Lindau. Many of our colleagues also work actively as emergency doctors in the emergency services.

# Privita

A bright, modern hospital room. The room features a large window with light-colored curtains. In the foreground, there are two red upholstered armchairs. To the right, a desk with a red chair and a reading lamp is visible. A bed with yellow pillows is partially seen on the right. The room is well-lit and has a clean, professional appearance.

- Modern comfortable bed
- Elegant sitting area with upholstered furniture
- Free minibar
- Desk with reading lamp
- Generous cupboards with integrated safe and luggage space
- Stylish pictures and decoration
- Special lighting concept
- The most up-to-date communication equipment
- Lounge for patients and visitors
- Culinary delicacies

# The Lindau Comfort Clinic

## Your well-being is our strength

Recuperation in a discerning atmosphere – that is the spirit of the Privata Comfort Clinic Lindau. Our clinic combines outstanding medical services with top quality facilities and first-class service.

The Privata Comfort Clinic Lindau is a small, personal unit within the hospital that offers you exceptional services. It

fulfils the highest demands in features and furnishings with its generous and elegantly equipped superior rooms in preferential locations. The room plans integrate a patient room, living area and office and ensure that, this way, you feel as if you are in a comfortable hotel.

In some of the rooms we can also offer you your own balcony.

### Our medical services

- More attention from specialist doctors
- The most up-to-date medical technology
- Coordinated pre-admission and post-discharge care
- Guaranteed short-term appointment allocation
- A high level of personal care
- More therapies on offer every day

Contact us if you have any questions on paying for costs or on admission.

Our patient management team is pleased to help you:

# management

“You are in good hands here!” Fulfilling this guiding principle forms the basis of our quality management work. We have a quality management system that places the interests and well-being of our patients, employees and partners in the foreground. But quality does not just happen. It must be worked on afresh every day by everybody. Surveys are carried out regularly with patients, employees and referring doctors, as important improvements are derived from their feedback. In 2013, over 85% of our patients would have recommended us to friends and acquaintances.

We have been certified by KTQ (Kooperation für Transparenz und Qualität im Gesundheitswesen) since 2011. With the endoprosthesis centre “EndoLindau-Bodensee”, we were the first certified location in Allgäu and in Oberschwaben for neighbourhood,

first-class patient care in the areas of operative hip and knee joint care. Making quality transparent is a goal of all Asklepios hospitals. For this reason, our hospital takes part in the hospital portal “Qualitätskliniken.de”. In the four quality pillars of patient safety, patient satisfaction, referrer satisfaction and medical results quality, you can find a detailed view of the quality in our hospital.

## Praise and criticism

Were you happy with us? Were you satisfied with the medical care? What could we do better? Your opinion is important to us and we look forward to receiving your feedback! Whether in writing using our eco-friendly praise and criticism form or personally with our complaints management representative.

Tailor-made for  
and

# your recuperation rest

Our location is unique: A historic island with unmistakable charm, surrounded by a crystal-clear lake and lush green countryside. And a chain of usually snow-covered mountains raises itself in the background.

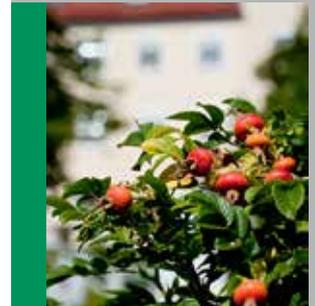

Pleasure boat trips will take you on excursions across the lake to the flower-bedecked island of Mainau and to the Rheinfall waterfalls in Schaffhausen.

Plan an excursion to the nearby Alpine countries of Switzerland or Austria with attractions such as the Appenzeller Land and the eagle observatory

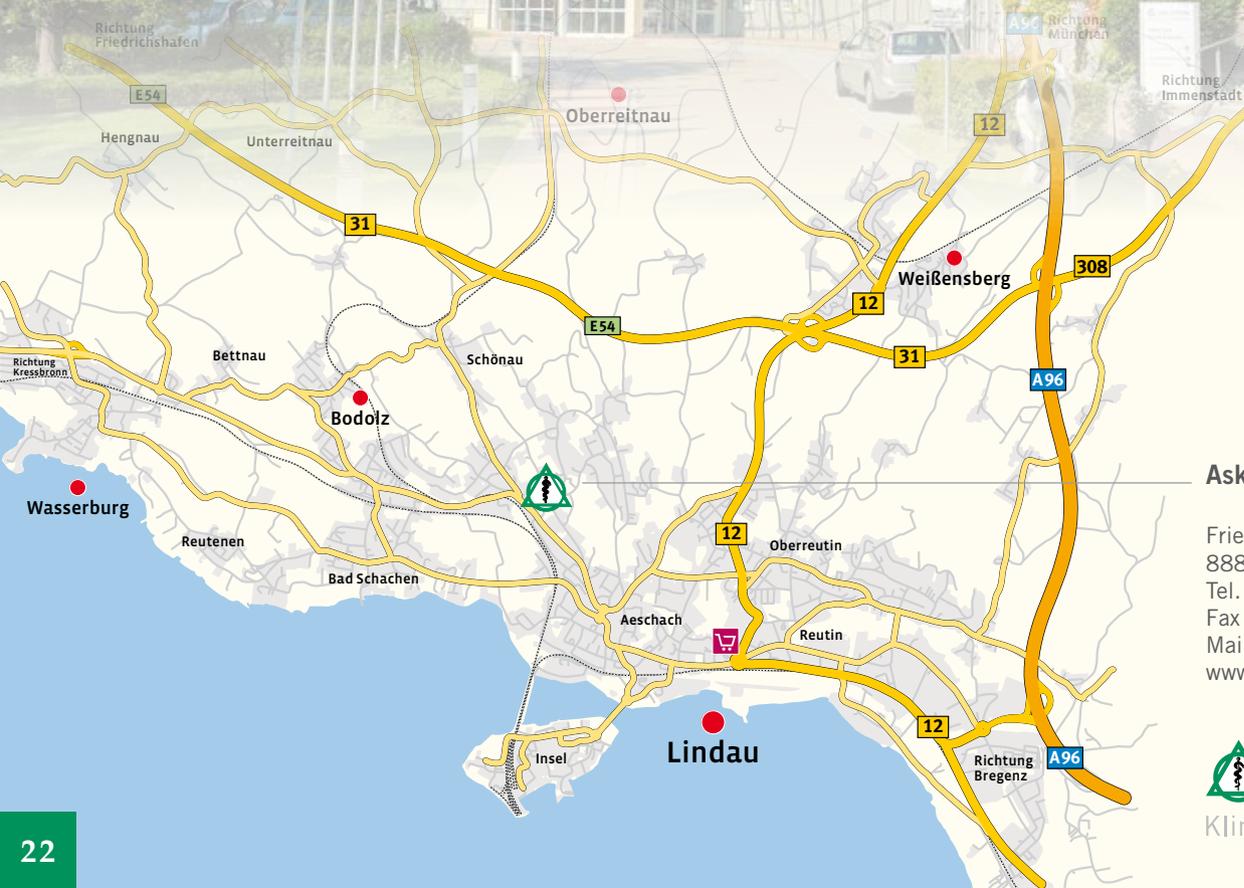

on the Pfänder mountain. Discover the special attraction of the Dornier Museum and the Zeppelin Museum in Friedrichshafen or the rustic charm of the Hops Museum in Tettngang.

Enjoy the atmosphere on a stroll through the historic district of Lindau on Lake Constance or experience the Bregenz Festival in high summer – a special event by the lake.

Each breath contributes to recovery here.

Klinik Lindau

# our hospital

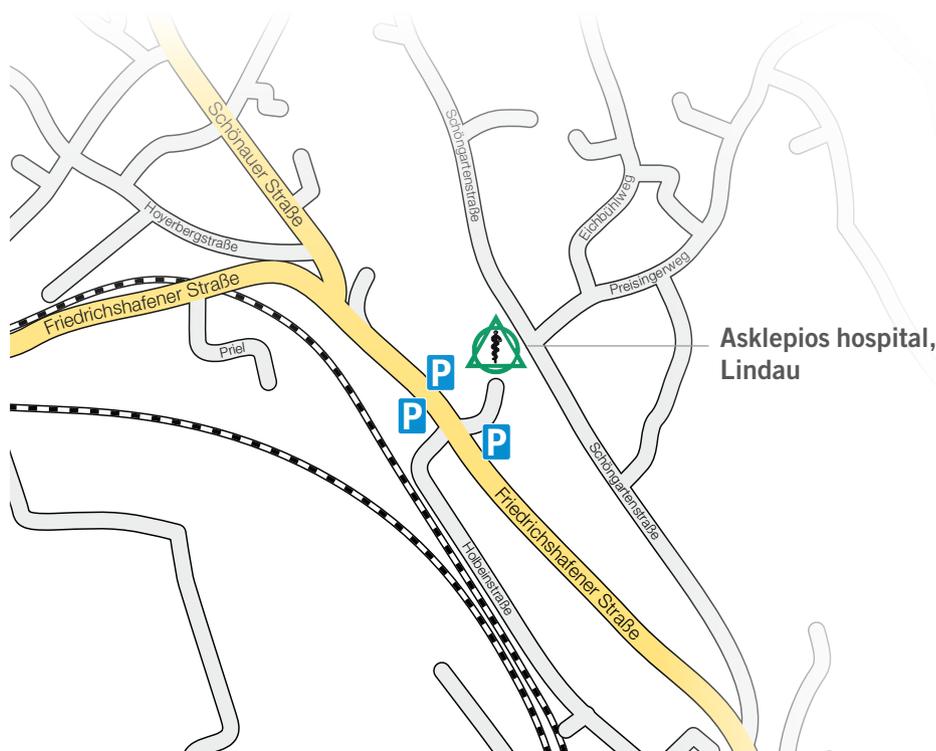

Lindau is one of the best-connected towns on Lake Constance.

With the German railway, the Austrian railway or the Swiss railway, you arrive directly on the historic island and close to the harbour with its lake promenade.

From there, you can travel conveniently to our hospital in less than 10 minutes with the well-developed city bus network or with one of the numerous taxis.

By car you can reach Lindau on the A96 from Munich (180 km). In the east-west direction, the regional road B31 runs from Lindau via Friedrichshafen and Meersburg to France.

If arriving by air, Lindau is in an ideal position in the middle of a triangle of large, international airports and close to the regional airport in Friedrichshafen.
